

NCERT CLASS 2

60 Questions Per Topic

Based on the refined 2026–27 curriculum map created for this project.

Each curriculum topic below contains exactly 60 questions: understanding, examples/classification, comparison, application, reasoning/error analysis, and higher-order activity.

These are question-bank items derived from the topic descriptions in the supplied curriculum map. Validate against the exact school/textbook edition before high-stakes use.

MATHEMATICS — 1. A Day at the Beach

Coverage: ■ Counting in groups; repeated groups; early multiplication thinking.

Understanding

1. What is ■ Counting in groups, and what are its main features? Use a simple example.
2. What is repeated groups, and what are its main features? Use a school-life example.
3. What is early multiplication thinking., and what are its main features? Use a real-world example.
4. What is ■ Counting in groups, and what are its main features? Show the idea with a diagram where appropriate.
5. What is repeated groups, and what are its main features? Explain in your own words.
6. What is early multiplication thinking., and what are its main features? Give a step-by-step response.
7. What is ■ Counting in groups, and what are its main features? Mention one common misconception.
8. What is repeated groups, and what are its main features? State one practical application.
9. What is early multiplication thinking., and what are its main features? Justify your response.
10. What is ■ Counting in groups, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to repeated groups and explain each. Use a simple example.
12. Give two examples related to early multiplication thinking. and explain each. Use a school-life example.
13. Give two examples related to ■ Counting in groups and explain each. Use a real-world example.
14. Give two examples related to repeated groups and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to early multiplication thinking. and explain each. Explain in your own words.
16. Give two examples related to ■ Counting in groups and explain each. Give a step-by-step response.
17. Give two examples related to repeated groups and explain each. Mention one common misconception.
18. Give two examples related to early multiplication thinking. and explain each. State one practical application.
19. Give two examples related to ■ Counting in groups and explain each. Justify your response.
20. Give two examples related to repeated groups and explain each. Include the relevant rule or principle.

Comparison

21. How is early multiplication thinking. related to ■ Counting in groups? Compare the two ideas. Use a simple example.
22. How is ■ Counting in groups related to repeated groups? Compare the two ideas. Use a school-life example.
23. How is repeated groups related to early multiplication thinking.? Compare the two ideas. Use a real-world example.
24. How is early multiplication thinking. related to ■ Counting in groups? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Counting in groups related to repeated groups? Compare the two ideas. Explain in your own words.
26. How is repeated groups related to early multiplication thinking.? Compare the two ideas. Give a step-by-step response.
27. How is early multiplication thinking. related to ■ Counting in groups? Compare the two ideas. Mention one common misconception.
28. How is ■ Counting in groups related to repeated groups? Compare the two ideas. State one practical application.
29. How is repeated groups related to early multiplication thinking.? Compare the two ideas. Justify your response.
30. How is early multiplication thinking. related to ■ Counting in groups? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Counting in groups to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply repeated groups to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply early multiplication thinking. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Counting in groups to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply repeated groups to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply early multiplication thinking. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Counting in groups to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply repeated groups to a realistic situation. What would you do or calculate? State one practical application.
39. Apply early multiplication thinking. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Counting in groups to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of repeated groups. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of early multiplication thinking.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Counting in groups. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of repeated groups. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of early multiplication thinking.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Counting in groups. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of repeated groups. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of early multiplication thinking.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Counting in groups. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of repeated groups. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication thinking.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Counting in groups. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show repeated groups. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication thinking.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Counting in groups. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show repeated groups. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication thinking.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Counting in groups. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show repeated groups. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication thinking.. Include the relevant rule or principle.

MATHEMATICS — 2. Shapes Around Us

Coverage: ■ 3D shapes; faces, edges and corners; recognising solids in everyday objects.

Understanding

1. What is ■ 3D shapes, and what are its main features? Use a simple example.
2. What is faces, and what are its main features? Use a school-life example.
3. What is edges and corners, and what are its main features? Use a real-world example.
4. What is recognising solids in everyday objects., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ 3D shapes, and what are its main features? Explain in your own words.
6. What is faces, and what are its main features? Give a step-by-step response.
7. What is edges and corners, and what are its main features? Mention one common misconception.
8. What is recognising solids in everyday objects., and what are its main features? State one practical application.
9. What is ■ 3D shapes, and what are its main features? Justify your response.
10. What is faces, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to edges and corners and explain each. Use a simple example.
12. Give two examples related to recognising solids in everyday objects. and explain each. Use a school-life example.
13. Give two examples related to ■ 3D shapes and explain each. Use a real-world example.
14. Give two examples related to faces and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to edges and corners and explain each. Explain in your own words.
16. Give two examples related to recognising solids in everyday objects. and explain each. Give a step-by-step response.
17. Give two examples related to ■ 3D shapes and explain each. Mention one common misconception.
18. Give two examples related to faces and explain each. State one practical application.
19. Give two examples related to edges and corners and explain each. Justify your response.
20. Give two examples related to recognising solids in everyday objects. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ 3D shapes related to faces? Compare the two ideas. Use a simple example.
22. How is faces related to edges and corners? Compare the two ideas. Use a school-life example.
23. How is edges and corners related to recognising solids in everyday objects.? Compare the two ideas. Use a real-world example.
24. How is recognising solids in everyday objects. related to ■ 3D shapes? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ 3D shapes related to faces? Compare the two ideas. Explain in your own words.
26. How is faces related to edges and corners? Compare the two ideas. Give a step-by-step response.
27. How is edges and corners related to recognising solids in everyday objects.? Compare the two ideas. Mention one common misconception.
28. How is recognising solids in everyday objects. related to ■ 3D shapes? Compare the two ideas. State one practical application.
29. How is ■ 3D shapes related to faces? Compare the two ideas. Justify your response.
30. How is faces related to edges and corners? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply edges and corners to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply recognising solids in everyday objects. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ 3D shapes to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply faces to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply edges and corners to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply recognising solids in everyday objects. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ 3D shapes to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply faces to a realistic situation. What would you do or calculate? State one practical application.
39. Apply edges and corners to a realistic situation. What would you do or calculate? Justify your response.
40. Apply recognising solids in everyday objects. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ 3D shapes. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of faces. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of edges and corners. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of recognising solids in everyday objects.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ 3D shapes. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of faces. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of edges and corners. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of recognising solids in everyday objects.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ 3D shapes. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of faces. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show edges and corners. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show recognising solids in everyday objects.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ 3D shapes. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show faces. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show edges and corners. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show recognising solids in everyday objects.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ 3D shapes. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show faces. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show edges and corners. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show recognising solids in everyday objects.. Include the relevant rule or principle.

MATHEMATICS — 3. Fun with Numbers

Coverage: ■ Numbers to 100; place value; comparison; sequencing; number names.

Understanding

1. What is ■ Numbers to 100, and what are its main features? Use a simple example.
2. What is place value, and what are its main features? Use a school-life example.
3. What is comparison, and what are its main features? Use a real-world example.
4. What is sequencing, and what are its main features? Show the idea with a diagram where appropriate.
5. What is number names., and what are its main features? Explain in your own words.
6. What is ■ Numbers to 100, and what are its main features? Give a step-by-step response.
7. What is place value, and what are its main features? Mention one common misconception.
8. What is comparison, and what are its main features? State one practical application.
9. What is sequencing, and what are its main features? Justify your response.
10. What is number names., and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to ■ Numbers to 100 and explain each. Use a simple example.
12. Give two examples related to place value and explain each. Use a school-life example.
13. Give two examples related to comparison and explain each. Use a real-world example.
14. Give two examples related to sequencing and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to number names. and explain each. Explain in your own words.
16. Give two examples related to ■ Numbers to 100 and explain each. Give a step-by-step response.
17. Give two examples related to place value and explain each. Mention one common misconception.
18. Give two examples related to comparison and explain each. State one practical application.
19. Give two examples related to sequencing and explain each. Justify your response.
20. Give two examples related to number names. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Numbers to 100 related to place value? Compare the two ideas. Use a simple example.
22. How is place value related to comparison? Compare the two ideas. Use a school-life example.
23. How is comparison related to sequencing? Compare the two ideas. Use a real-world example.
24. How is sequencing related to number names.? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is number names. related to ■ Numbers to 100? Compare the two ideas. Explain in your own words.
26. How is ■ Numbers to 100 related to place value? Compare the two ideas. Give a step-by-step response.
27. How is place value related to comparison? Compare the two ideas. Mention one common misconception.
28. How is comparison related to sequencing? Compare the two ideas. State one practical application.
29. How is sequencing related to number names.? Compare the two ideas. Justify your response.
30. How is number names. related to ■ Numbers to 100? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Numbers to 100 to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply place value to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply comparison to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply sequencing to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply number names. to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply ■ Numbers to 100 to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply place value to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply comparison to a realistic situation. What would you do or calculate? State one practical application.
39. Apply sequencing to a realistic situation. What would you do or calculate? Justify your response.
40. Apply number names. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Numbers to 100. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of sequencing. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of number names.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Numbers to 100. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of sequencing. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of number names.. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Numbers to 100. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show place value. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show number names.. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Numbers to 100. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show place value. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show number names.. Include the relevant rule or principle.

MATHEMATICS — 4. Shadow Story (Togalu)

Coverage: ■ 2D shapes; silhouettes; shape recognition; visual reasoning.

Understanding

1. What is ■ 2D shapes, and what are its main features? Use a simple example.
2. What is silhouettes, and what are its main features? Use a school-life example.
3. What is shape recognition, and what are its main features? Use a real-world example.
4. What is visual reasoning., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ 2D shapes, and what are its main features? Explain in your own words.
6. What is silhouettes, and what are its main features? Give a step-by-step response.
7. What is shape recognition, and what are its main features? Mention one common misconception.
8. What is visual reasoning., and what are its main features? State one practical application.
9. What is ■ 2D shapes, and what are its main features? Justify your response.
10. What is silhouettes, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to shape recognition and explain each. Use a simple example.
12. Give two examples related to visual reasoning. and explain each. Use a school-life example.
13. Give two examples related to ■ 2D shapes and explain each. Use a real-world example.
14. Give two examples related to silhouettes and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to shape recognition and explain each. Explain in your own words.
16. Give two examples related to visual reasoning. and explain each. Give a step-by-step response.
17. Give two examples related to ■ 2D shapes and explain each. Mention one common misconception.
18. Give two examples related to silhouettes and explain each. State one practical application.
19. Give two examples related to shape recognition and explain each. Justify your response.
20. Give two examples related to visual reasoning. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ 2D shapes related to silhouettes? Compare the two ideas. Use a simple example.
22. How is silhouettes related to shape recognition? Compare the two ideas. Use a school-life example.
23. How is shape recognition related to visual reasoning.? Compare the two ideas. Use a real-world example.
24. How is visual reasoning. related to ■ 2D shapes? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ 2D shapes related to silhouettes? Compare the two ideas. Explain in your own words.
26. How is silhouettes related to shape recognition? Compare the two ideas. Give a step-by-step response.
27. How is shape recognition related to visual reasoning.? Compare the two ideas. Mention one common misconception.
28. How is visual reasoning. related to ■ 2D shapes? Compare the two ideas. State one practical application.
29. How is ■ 2D shapes related to silhouettes? Compare the two ideas. Justify your response.
30. How is silhouettes related to shape recognition? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply shape recognition to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply visual reasoning. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ 2D shapes to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply silhouettes to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply shape recognition to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply visual reasoning. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ 2D shapes to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply silhouettes to a realistic situation. What would you do or calculate? State one practical application.
39. Apply shape recognition to a realistic situation. What would you do or calculate? Justify your response.
40. Apply visual reasoning. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ 2D shapes. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of silhouettes. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of shape recognition. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of visual reasoning.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ 2D shapes. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of silhouettes. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of shape recognition. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of visual reasoning.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ 2D shapes. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of silhouettes. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show shape recognition. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show visual reasoning.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ 2D shapes. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show silhouettes. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show shape recognition. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show visual reasoning.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ 2D shapes. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show silhouettes. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show shape recognition. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show visual reasoning.. Include the relevant rule or principle.

MATHEMATICS — 5. Playing with Lines

Coverage: ■ Straight/curved lines; orientations; horizontal/vertical; positional language.

Understanding

1. What is ■ Straight/curved lines, and what are its main features? Use a simple example.
2. What is orientations, and what are its main features? Use a school-life example.
3. What is horizontal/vertical, and what are its main features? Use a real-world example.
4. What is positional language., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Straight/curved lines, and what are its main features? Explain in your own words.
6. What is orientations, and what are its main features? Give a step-by-step response.
7. What is horizontal/vertical, and what are its main features? Mention one common misconception.
8. What is positional language., and what are its main features? State one practical application.
9. What is ■ Straight/curved lines, and what are its main features? Justify your response.
10. What is orientations, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to horizontal/vertical and explain each. Use a simple example.
12. Give two examples related to positional language. and explain each. Use a school-life example.
13. Give two examples related to ■ Straight/curved lines and explain each. Use a real-world example.
14. Give two examples related to orientations and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to horizontal/vertical and explain each. Explain in your own words.
16. Give two examples related to positional language. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Straight/curved lines and explain each. Mention one common misconception.
18. Give two examples related to orientations and explain each. State one practical application.
19. Give two examples related to horizontal/vertical and explain each. Justify your response.
20. Give two examples related to positional language. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Straight/curved lines related to orientations? Compare the two ideas. Use a simple example.
22. How is orientations related to horizontal/vertical? Compare the two ideas. Use a school-life example.
23. How is horizontal/vertical related to positional language.? Compare the two ideas. Use a real-world example.
24. How is positional language. related to ■ Straight/curved lines? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Straight/curved lines related to orientations? Compare the two ideas. Explain in your own words.
26. How is orientations related to horizontal/vertical? Compare the two ideas. Give a step-by-step response.
27. How is horizontal/vertical related to positional language.? Compare the two ideas. Mention one common misconception.
28. How is positional language. related to ■ Straight/curved lines? Compare the two ideas. State one practical application.
29. How is ■ Straight/curved lines related to orientations? Compare the two ideas. Justify your response.
30. How is orientations related to horizontal/vertical? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply horizontal/vertical to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply positional language. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Straight/curved lines to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply orientations to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply horizontal/vertical to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply positional language. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Straight/curved lines to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply orientations to a realistic situation. What would you do or calculate? State one practical application.
39. Apply horizontal/vertical to a realistic situation. What would you do or calculate? Justify your response.
40. Apply positional language. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Straight/curved lines. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of orientations. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of horizontal/vertical. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of positional language.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Straight/curved lines. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of orientations. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of horizontal/vertical. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of positional language.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Straight/curved lines. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of orientations. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show horizontal/vertical. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show positional language.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Straight/curved lines. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show orientations. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show horizontal/vertical. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show positional language.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Straight/curved lines. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show orientations. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show horizontal/vertical. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show positional language.. Include the relevant rule or principle.

MATHEMATICS — 6. Decoration for Festival

Coverage: ■ Repeating patterns; symmetry-like arrangements; creating and extending patterns.

Understanding

1. What is ■ Repeating patterns, and what are its main features? Use a simple example.
2. What is symmetry-like arrangements, and what are its main features? Use a school-life example.
3. What is creating and extending patterns., and what are its main features? Use a real-world example.
4. What is ■ Repeating patterns, and what are its main features? Show the idea with a diagram where appropriate.
5. What is symmetry-like arrangements, and what are its main features? Explain in your own words.
6. What is creating and extending patterns., and what are its main features? Give a step-by-step response.
7. What is ■ Repeating patterns, and what are its main features? Mention one common misconception.
8. What is symmetry-like arrangements, and what are its main features? State one practical application.
9. What is creating and extending patterns., and what are its main features? Justify your response.
10. What is ■ Repeating patterns, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to symmetry-like arrangements and explain each. Use a simple example.
12. Give two examples related to creating and extending patterns. and explain each. Use a school-life example.
13. Give two examples related to ■ Repeating patterns and explain each. Use a real-world example.
14. Give two examples related to symmetry-like arrangements and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to creating and extending patterns. and explain each. Explain in your own words.
16. Give two examples related to ■ Repeating patterns and explain each. Give a step-by-step response.
17. Give two examples related to symmetry-like arrangements and explain each. Mention one common misconception.
18. Give two examples related to creating and extending patterns. and explain each. State one practical application.
19. Give two examples related to ■ Repeating patterns and explain each. Justify your response.
20. Give two examples related to symmetry-like arrangements and explain each. Include the relevant rule or principle.

Comparison

21. How is creating and extending patterns. related to ■ Repeating patterns? Compare the two ideas. Use a simple example.
22. How is ■ Repeating patterns related to symmetry-like arrangements? Compare the two ideas. Use a school-life example.
23. How is symmetry-like arrangements related to creating and extending patterns.? Compare the two ideas. Use a real-world example.
24. How is creating and extending patterns. related to ■ Repeating patterns? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Repeating patterns related to symmetry-like arrangements? Compare the two ideas. Explain in your own words.
26. How is symmetry-like arrangements related to creating and extending patterns.? Compare the two ideas. Give a step-by-step response.
27. How is creating and extending patterns. related to ■ Repeating patterns? Compare the two ideas. Mention one common misconception.
28. How is ■ Repeating patterns related to symmetry-like arrangements? Compare the two ideas. State one practical application.
29. How is symmetry-like arrangements related to creating and extending patterns.? Compare the two ideas. Justify your response.
30. How is creating and extending patterns. related to ■ Repeating patterns? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Repeating patterns to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply symmetry-like arrangements to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply creating and extending patterns. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Repeating patterns to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply symmetry-like arrangements to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply creating and extending patterns. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Repeating patterns to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply symmetry-like arrangements to a realistic situation. What would you do or calculate? State one practical application.
39. Apply creating and extending patterns. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Repeating patterns to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of symmetry-like arrangements. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of creating and extending patterns.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Repeating patterns. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of symmetry-like arrangements. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of creating and extending patterns.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Repeating patterns. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of symmetry-like arrangements. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of creating and extending patterns.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Repeating patterns. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of symmetry-like arrangements. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show creating and extending patterns.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Repeating patterns. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show symmetry-like arrangements. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show creating and extending patterns.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Repeating patterns. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show symmetry-like arrangements. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show creating and extending patterns.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Repeating patterns. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show symmetry-like arrangements. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show creating and extending patterns.. Include the relevant rule or principle.

MATHEMATICS — 7. Rani's Gift

Coverage: ■ Length/measurement; comparison; informal and standard units at an introductory level.

Understanding

1. What is ■ Length/measurement, and what are its main features? Use a simple example.
2. What is comparison, and what are its main features? Use a school-life example.
3. What is informal and standard units at an introductory level., and what are its main features? Use a real-world example.
4. What is ■ Length/measurement, and what are its main features? Show the idea with a diagram where appropriate.
5. What is comparison, and what are its main features? Explain in your own words.
6. What is informal and standard units at an introductory level., and what are its main features? Give a step-by-step response.
7. What is ■ Length/measurement, and what are its main features? Mention one common misconception.
8. What is comparison, and what are its main features? State one practical application.
9. What is informal and standard units at an introductory level., and what are its main features? Justify your response.
10. What is ■ Length/measurement, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to comparison and explain each. Use a simple example.
12. Give two examples related to informal and standard units at an introductory level. and explain each. Use a school-life example.
13. Give two examples related to ■ Length/measurement and explain each. Use a real-world example.
14. Give two examples related to comparison and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to informal and standard units at an introductory level. and explain each. Explain in your own words.
16. Give two examples related to ■ Length/measurement and explain each. Give a step-by-step response.
17. Give two examples related to comparison and explain each. Mention one common misconception.
18. Give two examples related to informal and standard units at an introductory level. and explain each. State one practical application.
19. Give two examples related to ■ Length/measurement and explain each. Justify your response.
20. Give two examples related to comparison and explain each. Include the relevant rule or principle.

Comparison

21. How is informal and standard units at an introductory level. related to ■ Length/measurement? Compare the two ideas. Use a simple example.
22. How is ■ Length/measurement related to comparison? Compare the two ideas. Use a school-life example.
23. How is comparison related to informal and standard units at an introductory level.? Compare the two ideas. Use a real-world example.
24. How is informal and standard units at an introductory level. related to ■ Length/measurement? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Length/measurement related to comparison? Compare the two ideas. Explain in your own words.
26. How is comparison related to informal and standard units at an introductory level.? Compare the two ideas. Give a step-by-step response.
27. How is informal and standard units at an introductory level. related to ■ Length/measurement? Compare the two ideas. Mention one common misconception.
28. How is ■ Length/measurement related to comparison? Compare the two ideas. State one practical application.
29. How is comparison related to informal and standard units at an introductory level.? Compare the two ideas. Justify your response.
30. How is informal and standard units at an introductory level. related to ■ Length/measurement? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Length/measurement to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply comparison to a realistic situation. What would you do or calculate? Use a school-life example.

33. Apply informal and standard units at an introductory level. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Length/measurement to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply comparison to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply informal and standard units at an introductory level. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Length/measurement to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply comparison to a realistic situation. What would you do or calculate? State one practical application.
39. Apply informal and standard units at an introductory level. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Length/measurement to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of informal and standard units at an introductory level.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Length/measurement. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of informal and standard units at an introductory level.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Length/measurement. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of informal and standard units at an introductory level.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Length/measurement. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show informal and standard units at an introductory level.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Length/measurement. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show informal and standard units at an introductory level.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Length/measurement. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show informal and standard units at an introductory level.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Length/measurement. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show informal and standard units at an introductory level.. Include the relevant rule or principle.

MATHEMATICS — 8. Grouping and Sharing

Coverage: ■ Equal groups; sharing; early multiplication/division ideas; fair-share situations.

Understanding

1. What is ■ Equal groups, and what are its main features? Use a simple example.
2. What is sharing, and what are its main features? Use a school-life example.
3. What is early multiplication/division ideas, and what are its main features? Use a real-world example.
4. What is fair-share situations., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Equal groups, and what are its main features? Explain in your own words.
6. What is sharing, and what are its main features? Give a step-by-step response.
7. What is early multiplication/division ideas, and what are its main features? Mention one common misconception.
8. What is fair-share situations., and what are its main features? State one practical application.
9. What is ■ Equal groups, and what are its main features? Justify your response.
10. What is sharing, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to early multiplication/division ideas and explain each. Use a simple example.
12. Give two examples related to fair-share situations. and explain each. Use a school-life example.
13. Give two examples related to ■ Equal groups and explain each. Use a real-world example.
14. Give two examples related to sharing and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to early multiplication/division ideas and explain each. Explain in your own words.
16. Give two examples related to fair-share situations. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Equal groups and explain each. Mention one common misconception.
18. Give two examples related to sharing and explain each. State one practical application.
19. Give two examples related to early multiplication/division ideas and explain each. Justify your response.
20. Give two examples related to fair-share situations. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Equal groups related to sharing? Compare the two ideas. Use a simple example.
22. How is sharing related to early multiplication/division ideas? Compare the two ideas. Use a school-life example.
23. How is early multiplication/division ideas related to fair-share situations.? Compare the two ideas. Use a real-world example.
24. How is fair-share situations. related to ■ Equal groups? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Equal groups related to sharing? Compare the two ideas. Explain in your own words.
26. How is sharing related to early multiplication/division ideas? Compare the two ideas. Give a step-by-step response.
27. How is early multiplication/division ideas related to fair-share situations.? Compare the two ideas. Mention one common misconception.
28. How is fair-share situations. related to ■ Equal groups? Compare the two ideas. State one practical application.
29. How is ■ Equal groups related to sharing? Compare the two ideas. Justify your response.
30. How is sharing related to early multiplication/division ideas? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply early multiplication/division ideas to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply fair-share situations. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Equal groups to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply sharing to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply early multiplication/division ideas to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply fair-share situations. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Equal groups to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply sharing to a realistic situation. What would you do or calculate? State one practical application.
39. Apply early multiplication/division ideas to a realistic situation. What would you do or calculate? Justify your response.
40. Apply fair-share situations. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Equal groups. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of early multiplication/division ideas. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of fair-share situations.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Equal groups. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of early multiplication/division ideas. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of fair-share situations.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Equal groups. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication/division ideas. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show fair-share situations.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Equal groups. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show sharing. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication/division ideas. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show fair-share situations.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Equal groups. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show sharing. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show early multiplication/division ideas. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show fair-share situations.. Include the relevant rule or principle.

MATHEMATICS — 9. Which Season is it?

Coverage: ■ Calendar; months; seasons; sequencing time; days and dates.

Understanding

1. What is ■ Calendar, and what are its main features? Use a simple example.
2. What is months, and what are its main features? Use a school-life example.
3. What is seasons, and what are its main features? Use a real-world example.
4. What is sequencing time, and what are its main features? Show the idea with a diagram where appropriate.
5. What is days and dates., and what are its main features? Explain in your own words.
6. What is ■ Calendar, and what are its main features? Give a step-by-step response.
7. What is months, and what are its main features? Mention one common misconception.
8. What is seasons, and what are its main features? State one practical application.
9. What is sequencing time, and what are its main features? Justify your response.
10. What is days and dates., and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to ■ Calendar and explain each. Use a simple example.
12. Give two examples related to months and explain each. Use a school-life example.
13. Give two examples related to seasons and explain each. Use a real-world example.
14. Give two examples related to sequencing time and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to days and dates. and explain each. Explain in your own words.
16. Give two examples related to ■ Calendar and explain each. Give a step-by-step response.
17. Give two examples related to months and explain each. Mention one common misconception.
18. Give two examples related to seasons and explain each. State one practical application.
19. Give two examples related to sequencing time and explain each. Justify your response.
20. Give two examples related to days and dates. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Calendar related to months? Compare the two ideas. Use a simple example.
22. How is months related to seasons? Compare the two ideas. Use a school-life example.
23. How is seasons related to sequencing time? Compare the two ideas. Use a real-world example.
24. How is sequencing time related to days and dates.? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is days and dates. related to ■ Calendar? Compare the two ideas. Explain in your own words.
26. How is ■ Calendar related to months? Compare the two ideas. Give a step-by-step response.
27. How is months related to seasons? Compare the two ideas. Mention one common misconception.
28. How is seasons related to sequencing time? Compare the two ideas. State one practical application.
29. How is sequencing time related to days and dates.? Compare the two ideas. Justify your response.
30. How is days and dates. related to ■ Calendar? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Calendar to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply months to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply seasons to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply sequencing time to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply days and dates. to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply ■ Calendar to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply months to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply seasons to a realistic situation. What would you do or calculate? State one practical application.
39. Apply sequencing time to a realistic situation. What would you do or calculate? Justify your response.
40. Apply days and dates. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Calendar. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of months. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of seasons. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of sequencing time. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of days and dates.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Calendar. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of months. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of seasons. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of sequencing time. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of days and dates.. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Calendar. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show months. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show seasons. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing time. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show days and dates.. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Calendar. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show months. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show seasons. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing time. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show days and dates.. Include the relevant rule or principle.

MATHEMATICS — 10. Fun at the Fair

Coverage: ■ Money; addition/subtraction in context; simple measurement and comparison.

Understanding

1. What is ■ Money, and what are its main features? Use a simple example.
2. What is addition/subtraction in context, and what are its main features? Use a school-life example.
3. What is simple measurement and comparison., and what are its main features? Use a real-world example.
4. What is ■ Money, and what are its main features? Show the idea with a diagram where appropriate.
5. What is addition/subtraction in context, and what are its main features? Explain in your own words.
6. What is simple measurement and comparison., and what are its main features? Give a step-by-step response.
7. What is ■ Money, and what are its main features? Mention one common misconception.
8. What is addition/subtraction in context, and what are its main features? State one practical application.
9. What is simple measurement and comparison., and what are its main features? Justify your response.
10. What is ■ Money, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to addition/subtraction in context and explain each. Use a simple example.
12. Give two examples related to simple measurement and comparison. and explain each. Use a school-life example.
13. Give two examples related to ■ Money and explain each. Use a real-world example.
14. Give two examples related to addition/subtraction in context and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to simple measurement and comparison. and explain each. Explain in your own words.
16. Give two examples related to ■ Money and explain each. Give a step-by-step response.
17. Give two examples related to addition/subtraction in context and explain each. Mention one common misconception.
18. Give two examples related to simple measurement and comparison. and explain each. State one practical application.
19. Give two examples related to ■ Money and explain each. Justify your response.
20. Give two examples related to addition/subtraction in context and explain each. Include the relevant rule or principle.

Comparison

21. How is simple measurement and comparison. related to ■ Money? Compare the two ideas. Use a simple example.
22. How is ■ Money related to addition/subtraction in context? Compare the two ideas. Use a school-life example.
23. How is addition/subtraction in context related to simple measurement and comparison.? Compare the two ideas. Use a real-world example.
24. How is simple measurement and comparison. related to ■ Money? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Money related to addition/subtraction in context? Compare the two ideas. Explain in your own words.
26. How is addition/subtraction in context related to simple measurement and comparison.? Compare the two ideas. Give a step-by-step response.
27. How is simple measurement and comparison. related to ■ Money? Compare the two ideas. Mention one common misconception.
28. How is ■ Money related to addition/subtraction in context? Compare the two ideas. State one practical application.
29. How is addition/subtraction in context related to simple measurement and comparison.? Compare the two ideas. Justify your response.
30. How is simple measurement and comparison. related to ■ Money? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Money to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply addition/subtraction in context to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply simple measurement and comparison. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Money to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.

35. Apply addition/subtraction in context to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply simple measurement and comparison. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Money to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply addition/subtraction in context to a realistic situation. What would you do or calculate? State one practical application.
39. Apply simple measurement and comparison. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Money to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of addition/subtraction in context. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of simple measurement and comparison.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Money. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of addition/subtraction in context. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of simple measurement and comparison.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Money. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of addition/subtraction in context. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of simple measurement and comparison.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Money. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of addition/subtraction in context. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show simple measurement and comparison.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Money. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction in context. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show simple measurement and comparison.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Money. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction in context. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show simple measurement and comparison.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Money. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction in context. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show simple measurement and comparison.. Include the relevant rule or principle.

MATHEMATICS — 11. Data Handling

Coverage: ■ Sorting; tally-like recording; picture representations; interpreting simple data.

Understanding

1. What is ■ Sorting, and what are its main features? Use a simple example.
2. What is tally-like recording, and what are its main features? Use a school-life example.
3. What is picture representations, and what are its main features? Use a real-world example.
4. What is interpreting simple data., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Sorting, and what are its main features? Explain in your own words.
6. What is tally-like recording, and what are its main features? Give a step-by-step response.
7. What is picture representations, and what are its main features? Mention one common misconception.
8. What is interpreting simple data., and what are its main features? State one practical application.
9. What is ■ Sorting, and what are its main features? Justify your response.
10. What is tally-like recording, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to picture representations and explain each. Use a simple example.
12. Give two examples related to interpreting simple data. and explain each. Use a school-life example.
13. Give two examples related to ■ Sorting and explain each. Use a real-world example.
14. Give two examples related to tally-like recording and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to picture representations and explain each. Explain in your own words.
16. Give two examples related to interpreting simple data. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Sorting and explain each. Mention one common misconception.
18. Give two examples related to tally-like recording and explain each. State one practical application.
19. Give two examples related to picture representations and explain each. Justify your response.
20. Give two examples related to interpreting simple data. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Sorting related to tally-like recording? Compare the two ideas. Use a simple example.
22. How is tally-like recording related to picture representations? Compare the two ideas. Use a school-life example.
23. How is picture representations related to interpreting simple data.? Compare the two ideas. Use a real-world example.
24. How is interpreting simple data. related to ■ Sorting? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Sorting related to tally-like recording? Compare the two ideas. Explain in your own words.
26. How is tally-like recording related to picture representations? Compare the two ideas. Give a step-by-step response.
27. How is picture representations related to interpreting simple data.? Compare the two ideas. Mention one common misconception.
28. How is interpreting simple data. related to ■ Sorting? Compare the two ideas. State one practical application.
29. How is ■ Sorting related to tally-like recording? Compare the two ideas. Justify your response.
30. How is tally-like recording related to picture representations? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply picture representations to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply interpreting simple data. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Sorting to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply tally-like recording to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply picture representations to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply interpreting simple data. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Sorting to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply tally-like recording to a realistic situation. What would you do or calculate? State one practical application.
39. Apply picture representations to a realistic situation. What would you do or calculate? Justify your response.
40. Apply interpreting simple data. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Sorting. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of tally-like recording. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of picture representations. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of interpreting simple data.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Sorting. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of tally-like recording. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of picture representations. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of interpreting simple data.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Sorting. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of tally-like recording. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show picture representations. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show interpreting simple data.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Sorting. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show tally-like recording. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show picture representations. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show interpreting simple data.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Sorting. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show tally-like recording. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show picture representations. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show interpreting simple data.. Include the relevant rule or principle.
