

NCERT CLASS 3

60 Questions Per Topic

Based on the refined 2026–27 curriculum map created for this project.

Each curriculum topic below contains exactly 60 questions: understanding, examples/classification, comparison, application, reasoning/error analysis, and higher-order activity.

These are question-bank items derived from the topic descriptions in the supplied curriculum map. Validate against the exact school/textbook edition before high-stakes use.

MATHEMATICS — 1. What's in a Name?

Coverage: ■ Number sense; names and representations; counting; comparison.

Understanding

1. What is ■ Number sense, and what are its main features? Use a simple example.
2. What is names and representations, and what are its main features? Use a school-life example.
3. What is counting, and what are its main features? Use a real-world example.
4. What is comparison., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Number sense, and what are its main features? Explain in your own words.
6. What is names and representations, and what are its main features? Give a step-by-step response.
7. What is counting, and what are its main features? Mention one common misconception.
8. What is comparison., and what are its main features? State one practical application.
9. What is ■ Number sense, and what are its main features? Justify your response.
10. What is names and representations, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to counting and explain each. Use a simple example.
12. Give two examples related to comparison. and explain each. Use a school-life example.
13. Give two examples related to ■ Number sense and explain each. Use a real-world example.
14. Give two examples related to names and representations and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to counting and explain each. Explain in your own words.
16. Give two examples related to comparison. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Number sense and explain each. Mention one common misconception.
18. Give two examples related to names and representations and explain each. State one practical application.
19. Give two examples related to counting and explain each. Justify your response.
20. Give two examples related to comparison. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Number sense related to names and representations? Compare the two ideas. Use a simple example.
22. How is names and representations related to counting? Compare the two ideas. Use a school-life example.
23. How is counting related to comparison.? Compare the two ideas. Use a real-world example.
24. How is comparison. related to ■ Number sense? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Number sense related to names and representations? Compare the two ideas. Explain in your own words.
26. How is names and representations related to counting? Compare the two ideas. Give a step-by-step response.
27. How is counting related to comparison.? Compare the two ideas. Mention one common misconception.
28. How is comparison. related to ■ Number sense? Compare the two ideas. State one practical application.
29. How is ■ Number sense related to names and representations? Compare the two ideas. Justify your response.
30. How is names and representations related to counting? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply counting to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply comparison. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Number sense to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply names and representations to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply counting to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply comparison. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Number sense to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply names and representations to a realistic situation. What would you do or calculate? State one practical application.
39. Apply counting to a realistic situation. What would you do or calculate? Justify your response.
40. Apply comparison. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Number sense. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of names and representations. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of counting. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of comparison.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Number sense. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of names and representations. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of counting. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of comparison.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Number sense. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of names and representations. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show counting. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show comparison.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Number sense. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show names and representations. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show counting. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show comparison.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Number sense. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show names and representations. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show counting. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show comparison.. Include the relevant rule or principle.

MATHEMATICS — 2. Toy Joy

Coverage: ■ Counting, grouping, addition/subtraction and mathematical communication.

Understanding

1. What is ■ Counting, and what are its main features? Use a simple example.
2. What is grouping, and what are its main features? Use a school-life example.
3. What is addition/subtraction and mathematical communication., and what are its main features? Use a real-world example.
4. What is ■ Counting, and what are its main features? Show the idea with a diagram where appropriate.
5. What is grouping, and what are its main features? Explain in your own words.
6. What is addition/subtraction and mathematical communication., and what are its main features? Give a step-by-step response.
7. What is ■ Counting, and what are its main features? Mention one common misconception.
8. What is grouping, and what are its main features? State one practical application.
9. What is addition/subtraction and mathematical communication., and what are its main features? Justify your response.
10. What is ■ Counting, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to grouping and explain each. Use a simple example.
12. Give two examples related to addition/subtraction and mathematical communication. and explain each. Use a school-life example.
13. Give two examples related to ■ Counting and explain each. Use a real-world example.
14. Give two examples related to grouping and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to addition/subtraction and mathematical communication. and explain each. Explain in your own words.
16. Give two examples related to ■ Counting and explain each. Give a step-by-step response.
17. Give two examples related to grouping and explain each. Mention one common misconception.
18. Give two examples related to addition/subtraction and mathematical communication. and explain each. State one practical application.
19. Give two examples related to ■ Counting and explain each. Justify your response.
20. Give two examples related to grouping and explain each. Include the relevant rule or principle.

Comparison

21. How is addition/subtraction and mathematical communication. related to ■ Counting? Compare the two ideas. Use a simple example.
22. How is ■ Counting related to grouping? Compare the two ideas. Use a school-life example.
23. How is grouping related to addition/subtraction and mathematical communication.? Compare the two ideas. Use a real-world example.
24. How is addition/subtraction and mathematical communication. related to ■ Counting? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Counting related to grouping? Compare the two ideas. Explain in your own words.
26. How is grouping related to addition/subtraction and mathematical communication.? Compare the two ideas. Give a step-by-step response.
27. How is addition/subtraction and mathematical communication. related to ■ Counting? Compare the two ideas. Mention one common misconception.
28. How is ■ Counting related to grouping? Compare the two ideas. State one practical application.
29. How is grouping related to addition/subtraction and mathematical communication.? Compare the two ideas. Justify your response.
30. How is addition/subtraction and mathematical communication. related to ■ Counting? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Counting to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply grouping to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply addition/subtraction and mathematical communication. to a realistic situation. What would you do or calculate? Use a real-world example.

34. Apply ■ Counting to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply grouping to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply addition/subtraction and mathematical communication. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Counting to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply grouping to a realistic situation. What would you do or calculate? State one practical application.
39. Apply addition/subtraction and mathematical communication. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Counting to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of grouping. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of addition/subtraction and mathematical communication.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Counting. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of grouping. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of addition/subtraction and mathematical communication.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Counting. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of grouping. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of addition/subtraction and mathematical communication.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Counting. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of grouping. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction and mathematical communication.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Counting. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show grouping. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction and mathematical communication.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Counting. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show grouping. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction and mathematical communication.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Counting. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show grouping. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction and mathematical communication.. Include the relevant rule or principle.

MATHEMATICS — 3. Double Century

Coverage: ■ Numbers to 200 and beyond; place value; comparison; estimation.

Understanding

1. What is ■ Numbers to 200 and beyond, and what are its main features? Use a simple example.
2. What is place value, and what are its main features? Use a school-life example.
3. What is comparison, and what are its main features? Use a real-world example.
4. What is estimation., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Numbers to 200 and beyond, and what are its main features? Explain in your own words.
6. What is place value, and what are its main features? Give a step-by-step response.
7. What is comparison, and what are its main features? Mention one common misconception.
8. What is estimation., and what are its main features? State one practical application.
9. What is ■ Numbers to 200 and beyond, and what are its main features? Justify your response.
10. What is place value, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to comparison and explain each. Use a simple example.
12. Give two examples related to estimation. and explain each. Use a school-life example.
13. Give two examples related to ■ Numbers to 200 and beyond and explain each. Use a real-world example.
14. Give two examples related to place value and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to comparison and explain each. Explain in your own words.
16. Give two examples related to estimation. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Numbers to 200 and beyond and explain each. Mention one common misconception.
18. Give two examples related to place value and explain each. State one practical application.
19. Give two examples related to comparison and explain each. Justify your response.
20. Give two examples related to estimation. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Numbers to 200 and beyond related to place value? Compare the two ideas. Use a simple example.
22. How is place value related to comparison? Compare the two ideas. Use a school-life example.
23. How is comparison related to estimation.? Compare the two ideas. Use a real-world example.
24. How is estimation. related to ■ Numbers to 200 and beyond? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Numbers to 200 and beyond related to place value? Compare the two ideas. Explain in your own words.
26. How is place value related to comparison? Compare the two ideas. Give a step-by-step response.
27. How is comparison related to estimation.? Compare the two ideas. Mention one common misconception.
28. How is estimation. related to ■ Numbers to 200 and beyond? Compare the two ideas. State one practical application.
29. How is ■ Numbers to 200 and beyond related to place value? Compare the two ideas. Justify your response.
30. How is place value related to comparison? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply comparison to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply estimation. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Numbers to 200 and beyond to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply place value to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply comparison to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply estimation. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Numbers to 200 and beyond to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply place value to a realistic situation. What would you do or calculate? State one practical application.
39. Apply comparison to a realistic situation. What would you do or calculate? Justify your response.
40. Apply estimation. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Numbers to 200 and beyond. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of estimation.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Numbers to 200 and beyond. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of estimation.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Numbers to 200 and beyond. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show estimation.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Numbers to 200 and beyond. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show place value. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show estimation.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Numbers to 200 and beyond. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show place value. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show estimation.. Include the relevant rule or principle.

MATHEMATICS — 4. Vacation with My Nani Maa

Coverage: ■ Operations in real-life contexts; time, money and travel-related reasoning.

Understanding

1. What is ■ Operations in real-life contexts, and what are its main features? Use a simple example.
2. What is time, and what are its main features? Use a school-life example.
3. What is money and travel-related reasoning., and what are its main features? Use a real-world example.
4. What is ■ Operations in real-life contexts, and what are its main features? Show the idea with a diagram where appropriate.
5. What is time, and what are its main features? Explain in your own words.
6. What is money and travel-related reasoning., and what are its main features? Give a step-by-step response.
7. What is ■ Operations in real-life contexts, and what are its main features? Mention one common misconception.
8. What is time, and what are its main features? State one practical application.
9. What is money and travel-related reasoning., and what are its main features? Justify your response.
10. What is ■ Operations in real-life contexts, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to time and explain each. Use a simple example.
12. Give two examples related to money and travel-related reasoning. and explain each. Use a school-life example.
13. Give two examples related to ■ Operations in real-life contexts and explain each. Use a real-world example.
14. Give two examples related to time and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to money and travel-related reasoning. and explain each. Explain in your own words.
16. Give two examples related to ■ Operations in real-life contexts and explain each. Give a step-by-step response.
17. Give two examples related to time and explain each. Mention one common misconception.
18. Give two examples related to money and travel-related reasoning. and explain each. State one practical application.
19. Give two examples related to ■ Operations in real-life contexts and explain each. Justify your response.
20. Give two examples related to time and explain each. Include the relevant rule or principle.

Comparison

21. How is money and travel-related reasoning. related to ■ Operations in real-life contexts? Compare the two ideas. Use a simple example.
22. How is ■ Operations in real-life contexts related to time? Compare the two ideas. Use a school-life example.
23. How is time related to money and travel-related reasoning.? Compare the two ideas. Use a real-world example.
24. How is money and travel-related reasoning. related to ■ Operations in real-life contexts? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Operations in real-life contexts related to time? Compare the two ideas. Explain in your own words.
26. How is time related to money and travel-related reasoning.? Compare the two ideas. Give a step-by-step response.
27. How is money and travel-related reasoning. related to ■ Operations in real-life contexts? Compare the two ideas. Mention one common misconception.
28. How is ■ Operations in real-life contexts related to time? Compare the two ideas. State one practical application.
29. How is time related to money and travel-related reasoning.? Compare the two ideas. Justify your response.
30. How is money and travel-related reasoning. related to ■ Operations in real-life contexts? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Operations in real-life contexts to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply time to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply money and travel-related reasoning. to a realistic situation. What would you do or calculate? Use a real-world example.

34. Apply ■ Operations in real-life contexts to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply time to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply money and travel-related reasoning. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Operations in real-life contexts to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply time to a realistic situation. What would you do or calculate? State one practical application.
39. Apply money and travel-related reasoning. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Operations in real-life contexts to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of time. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of money and travel-related reasoning.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Operations in real-life contexts. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of time. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of money and travel-related reasoning.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Operations in real-life contexts. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of time. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of money and travel-related reasoning.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Operations in real-life contexts. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of time. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show money and travel-related reasoning.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Operations in real-life contexts. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show time. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show money and travel-related reasoning.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Operations in real-life contexts. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show time. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show money and travel-related reasoning.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Operations in real-life contexts. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show time. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show money and travel-related reasoning.. Include the relevant rule or principle.

MATHEMATICS — 5. Fun with Shapes

Coverage: ■ 2D shapes; sides/corners; symmetry; spatial reasoning.

Understanding

1. What is ■ 2D shapes, and what are its main features? Use a simple example.
2. What is sides/corners, and what are its main features? Use a school-life example.
3. What is symmetry, and what are its main features? Use a real-world example.
4. What is spatial reasoning., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ 2D shapes, and what are its main features? Explain in your own words.
6. What is sides/corners, and what are its main features? Give a step-by-step response.
7. What is symmetry, and what are its main features? Mention one common misconception.
8. What is spatial reasoning., and what are its main features? State one practical application.
9. What is ■ 2D shapes, and what are its main features? Justify your response.
10. What is sides/corners, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to symmetry and explain each. Use a simple example.
12. Give two examples related to spatial reasoning. and explain each. Use a school-life example.
13. Give two examples related to ■ 2D shapes and explain each. Use a real-world example.
14. Give two examples related to sides/corners and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to symmetry and explain each. Explain in your own words.
16. Give two examples related to spatial reasoning. and explain each. Give a step-by-step response.
17. Give two examples related to ■ 2D shapes and explain each. Mention one common misconception.
18. Give two examples related to sides/corners and explain each. State one practical application.
19. Give two examples related to symmetry and explain each. Justify your response.
20. Give two examples related to spatial reasoning. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ 2D shapes related to sides/corners? Compare the two ideas. Use a simple example.
22. How is sides/corners related to symmetry? Compare the two ideas. Use a school-life example.
23. How is symmetry related to spatial reasoning.? Compare the two ideas. Use a real-world example.
24. How is spatial reasoning. related to ■ 2D shapes? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ 2D shapes related to sides/corners? Compare the two ideas. Explain in your own words.
26. How is sides/corners related to symmetry? Compare the two ideas. Give a step-by-step response.
27. How is symmetry related to spatial reasoning.? Compare the two ideas. Mention one common misconception.
28. How is spatial reasoning. related to ■ 2D shapes? Compare the two ideas. State one practical application.
29. How is ■ 2D shapes related to sides/corners? Compare the two ideas. Justify your response.
30. How is sides/corners related to symmetry? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply symmetry to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply spatial reasoning. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ 2D shapes to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply sides/corners to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply symmetry to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply spatial reasoning. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ 2D shapes to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply sides/corners to a realistic situation. What would you do or calculate? State one practical application.
39. Apply symmetry to a realistic situation. What would you do or calculate? Justify your response.
40. Apply spatial reasoning. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ 2D shapes. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of sides/corners. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of symmetry. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of spatial reasoning.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ 2D shapes. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of sides/corners. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of symmetry. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of spatial reasoning.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ 2D shapes. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of sides/corners. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show symmetry. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show spatial reasoning.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ 2D shapes. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show sides/corners. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show symmetry. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show spatial reasoning.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ 2D shapes. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show sides/corners. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show symmetry. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show spatial reasoning.. Include the relevant rule or principle.

MATHEMATICS — 6. House of Hundreds-I

Coverage: ■ Hundreds, tens and ones; place value; addition/subtraction.

Understanding

1. What is ■ Hundreds, and what are its main features? Use a simple example.
2. What is tens and ones, and what are its main features? Use a school-life example.
3. What is place value, and what are its main features? Use a real-world example.
4. What is addition/subtraction., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Hundreds, and what are its main features? Explain in your own words.
6. What is tens and ones, and what are its main features? Give a step-by-step response.
7. What is place value, and what are its main features? Mention one common misconception.
8. What is addition/subtraction., and what are its main features? State one practical application.
9. What is ■ Hundreds, and what are its main features? Justify your response.
10. What is tens and ones, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to place value and explain each. Use a simple example.
12. Give two examples related to addition/subtraction. and explain each. Use a school-life example.
13. Give two examples related to ■ Hundreds and explain each. Use a real-world example.
14. Give two examples related to tens and ones and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to place value and explain each. Explain in your own words.
16. Give two examples related to addition/subtraction. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Hundreds and explain each. Mention one common misconception.
18. Give two examples related to tens and ones and explain each. State one practical application.
19. Give two examples related to place value and explain each. Justify your response.
20. Give two examples related to addition/subtraction. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Hundreds related to tens and ones? Compare the two ideas. Use a simple example.
22. How is tens and ones related to place value? Compare the two ideas. Use a school-life example.
23. How is place value related to addition/subtraction.? Compare the two ideas. Use a real-world example.
24. How is addition/subtraction. related to ■ Hundreds? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Hundreds related to tens and ones? Compare the two ideas. Explain in your own words.
26. How is tens and ones related to place value? Compare the two ideas. Give a step-by-step response.
27. How is place value related to addition/subtraction.? Compare the two ideas. Mention one common misconception.
28. How is addition/subtraction. related to ■ Hundreds? Compare the two ideas. State one practical application.
29. How is ■ Hundreds related to tens and ones? Compare the two ideas. Justify your response.
30. How is tens and ones related to place value? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply place value to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply addition/subtraction. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Hundreds to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply tens and ones to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply place value to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply addition/subtraction. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Hundreds to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply tens and ones to a realistic situation. What would you do or calculate? State one practical application.
39. Apply place value to a realistic situation. What would you do or calculate? Justify your response.
40. Apply addition/subtraction. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Hundreds. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of tens and ones. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of addition/subtraction.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Hundreds. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of tens and ones. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of place value. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of addition/subtraction.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Hundreds. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of tens and ones. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show place value. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Hundreds. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show tens and ones. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show place value. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Hundreds. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show tens and ones. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show place value. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction.. Include the relevant rule or principle.

MATHEMATICS — 7. Raksha Bandhan

Coverage: ■ Patterns, sharing, grouping and contextual arithmetic.

Understanding

1. What is ■ Patterns, and what are its main features? Use a simple example.
2. What is sharing, and what are its main features? Use a school-life example.
3. What is grouping and contextual arithmetic., and what are its main features? Use a real-world example.
4. What is ■ Patterns, and what are its main features? Show the idea with a diagram where appropriate.
5. What is sharing, and what are its main features? Explain in your own words.
6. What is grouping and contextual arithmetic., and what are its main features? Give a step-by-step response.
7. What is ■ Patterns, and what are its main features? Mention one common misconception.
8. What is sharing, and what are its main features? State one practical application.
9. What is grouping and contextual arithmetic., and what are its main features? Justify your response.
10. What is ■ Patterns, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to sharing and explain each. Use a simple example.
12. Give two examples related to grouping and contextual arithmetic. and explain each. Use a school-life example.
13. Give two examples related to ■ Patterns and explain each. Use a real-world example.
14. Give two examples related to sharing and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to grouping and contextual arithmetic. and explain each. Explain in your own words.
16. Give two examples related to ■ Patterns and explain each. Give a step-by-step response.
17. Give two examples related to sharing and explain each. Mention one common misconception.
18. Give two examples related to grouping and contextual arithmetic. and explain each. State one practical application.
19. Give two examples related to ■ Patterns and explain each. Justify your response.
20. Give two examples related to sharing and explain each. Include the relevant rule or principle.

Comparison

21. How is grouping and contextual arithmetic. related to ■ Patterns? Compare the two ideas. Use a simple example.
22. How is ■ Patterns related to sharing? Compare the two ideas. Use a school-life example.
23. How is sharing related to grouping and contextual arithmetic.? Compare the two ideas. Use a real-world example.
24. How is grouping and contextual arithmetic. related to ■ Patterns? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Patterns related to sharing? Compare the two ideas. Explain in your own words.
26. How is sharing related to grouping and contextual arithmetic.? Compare the two ideas. Give a step-by-step response.
27. How is grouping and contextual arithmetic. related to ■ Patterns? Compare the two ideas. Mention one common misconception.
28. How is ■ Patterns related to sharing? Compare the two ideas. State one practical application.
29. How is sharing related to grouping and contextual arithmetic.? Compare the two ideas. Justify your response.
30. How is grouping and contextual arithmetic. related to ■ Patterns? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Patterns to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply sharing to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply grouping and contextual arithmetic. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Patterns to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply sharing to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply grouping and contextual arithmetic. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Patterns to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply sharing to a realistic situation. What would you do or calculate? State one practical application.
39. Apply grouping and contextual arithmetic. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Patterns to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of grouping and contextual arithmetic.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Patterns. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of grouping and contextual arithmetic.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Patterns. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of grouping and contextual arithmetic.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Patterns. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of sharing. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show grouping and contextual arithmetic.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Patterns. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show sharing. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show grouping and contextual arithmetic.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Patterns. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show sharing. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show grouping and contextual arithmetic.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Patterns. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show sharing. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show grouping and contextual arithmetic.. Include the relevant rule or principle.

MATHEMATICS — 8. Fair Share

Coverage: ■ Equal sharing; division idea; fractions as fair parts.

Understanding

1. What is ■ Equal sharing, and what are its main features? Use a simple example.
2. What is division idea, and what are its main features? Use a school-life example.
3. What is fractions as fair parts., and what are its main features? Use a real-world example.
4. What is ■ Equal sharing, and what are its main features? Show the idea with a diagram where appropriate.
5. What is division idea, and what are its main features? Explain in your own words.
6. What is fractions as fair parts., and what are its main features? Give a step-by-step response.
7. What is ■ Equal sharing, and what are its main features? Mention one common misconception.
8. What is division idea, and what are its main features? State one practical application.
9. What is fractions as fair parts., and what are its main features? Justify your response.
10. What is ■ Equal sharing, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to division idea and explain each. Use a simple example.
12. Give two examples related to fractions as fair parts. and explain each. Use a school-life example.
13. Give two examples related to ■ Equal sharing and explain each. Use a real-world example.
14. Give two examples related to division idea and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to fractions as fair parts. and explain each. Explain in your own words.
16. Give two examples related to ■ Equal sharing and explain each. Give a step-by-step response.
17. Give two examples related to division idea and explain each. Mention one common misconception.
18. Give two examples related to fractions as fair parts. and explain each. State one practical application.
19. Give two examples related to ■ Equal sharing and explain each. Justify your response.
20. Give two examples related to division idea and explain each. Include the relevant rule or principle.

Comparison

21. How is fractions as fair parts. related to ■ Equal sharing? Compare the two ideas. Use a simple example.
22. How is ■ Equal sharing related to division idea? Compare the two ideas. Use a school-life example.
23. How is division idea related to fractions as fair parts.? Compare the two ideas. Use a real-world example.
24. How is fractions as fair parts. related to ■ Equal sharing? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Equal sharing related to division idea? Compare the two ideas. Explain in your own words.
26. How is division idea related to fractions as fair parts.? Compare the two ideas. Give a step-by-step response.
27. How is fractions as fair parts. related to ■ Equal sharing? Compare the two ideas. Mention one common misconception.
28. How is ■ Equal sharing related to division idea? Compare the two ideas. State one practical application.
29. How is division idea related to fractions as fair parts.? Compare the two ideas. Justify your response.
30. How is fractions as fair parts. related to ■ Equal sharing? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Equal sharing to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply division idea to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply fractions as fair parts. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Equal sharing to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply division idea to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply fractions as fair parts. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Equal sharing to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply division idea to a realistic situation. What would you do or calculate? State one practical application.
39. Apply fractions as fair parts. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Equal sharing to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of division idea. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of fractions as fair parts.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Equal sharing. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of division idea. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of fractions as fair parts.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Equal sharing. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of division idea. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of fractions as fair parts.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Equal sharing. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of division idea. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show fractions as fair parts.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Equal sharing. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show division idea. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show fractions as fair parts.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Equal sharing. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show division idea. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show fractions as fair parts.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Equal sharing. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show division idea. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show fractions as fair parts.. Include the relevant rule or principle.

MATHEMATICS — 9. House of Hundreds-II

Coverage: ■ Larger numbers; regrouping; addition/subtraction; estimation.

Understanding

1. What is ■ Larger numbers, and what are its main features? Use a simple example.
2. What is regrouping, and what are its main features? Use a school-life example.
3. What is addition/subtraction, and what are its main features? Use a real-world example.
4. What is estimation., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Larger numbers, and what are its main features? Explain in your own words.
6. What is regrouping, and what are its main features? Give a step-by-step response.
7. What is addition/subtraction, and what are its main features? Mention one common misconception.
8. What is estimation., and what are its main features? State one practical application.
9. What is ■ Larger numbers, and what are its main features? Justify your response.
10. What is regrouping, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to addition/subtraction and explain each. Use a simple example.
12. Give two examples related to estimation. and explain each. Use a school-life example.
13. Give two examples related to ■ Larger numbers and explain each. Use a real-world example.
14. Give two examples related to regrouping and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to addition/subtraction and explain each. Explain in your own words.
16. Give two examples related to estimation. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Larger numbers and explain each. Mention one common misconception.
18. Give two examples related to regrouping and explain each. State one practical application.
19. Give two examples related to addition/subtraction and explain each. Justify your response.
20. Give two examples related to estimation. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Larger numbers related to regrouping? Compare the two ideas. Use a simple example.
22. How is regrouping related to addition/subtraction? Compare the two ideas. Use a school-life example.
23. How is addition/subtraction related to estimation.? Compare the two ideas. Use a real-world example.
24. How is estimation. related to ■ Larger numbers? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Larger numbers related to regrouping? Compare the two ideas. Explain in your own words.
26. How is regrouping related to addition/subtraction? Compare the two ideas. Give a step-by-step response.
27. How is addition/subtraction related to estimation.? Compare the two ideas. Mention one common misconception.
28. How is estimation. related to ■ Larger numbers? Compare the two ideas. State one practical application.
29. How is ■ Larger numbers related to regrouping? Compare the two ideas. Justify your response.
30. How is regrouping related to addition/subtraction? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply addition/subtraction to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply estimation. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Larger numbers to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply regrouping to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply addition/subtraction to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply estimation. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Larger numbers to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply regrouping to a realistic situation. What would you do or calculate? State one practical application.
39. Apply addition/subtraction to a realistic situation. What would you do or calculate? Justify your response.
40. Apply estimation. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Larger numbers. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of regrouping. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of addition/subtraction. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of estimation.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Larger numbers. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of regrouping. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of addition/subtraction. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of estimation.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Larger numbers. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of regrouping. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show estimation.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Larger numbers. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show regrouping. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show estimation.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Larger numbers. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show regrouping. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show addition/subtraction. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show estimation.. Include the relevant rule or principle.

MATHEMATICS — 10. Fun at Class Party!

Coverage: ■ Multiplication/grouping; measurement; data and word problems.

Understanding

1. What is ■ Multiplication/grouping, and what are its main features? Use a simple example.
2. What is measurement, and what are its main features? Use a school-life example.
3. What is data and word problems., and what are its main features? Use a real-world example.
4. What is ■ Multiplication/grouping, and what are its main features? Show the idea with a diagram where appropriate.
5. What is measurement, and what are its main features? Explain in your own words.
6. What is data and word problems., and what are its main features? Give a step-by-step response.
7. What is ■ Multiplication/grouping, and what are its main features? Mention one common misconception.
8. What is measurement, and what are its main features? State one practical application.
9. What is data and word problems., and what are its main features? Justify your response.
10. What is ■ Multiplication/grouping, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to measurement and explain each. Use a simple example.
12. Give two examples related to data and word problems. and explain each. Use a school-life example.
13. Give two examples related to ■ Multiplication/grouping and explain each. Use a real-world example.
14. Give two examples related to measurement and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to data and word problems. and explain each. Explain in your own words.
16. Give two examples related to ■ Multiplication/grouping and explain each. Give a step-by-step response.
17. Give two examples related to measurement and explain each. Mention one common misconception.
18. Give two examples related to data and word problems. and explain each. State one practical application.
19. Give two examples related to ■ Multiplication/grouping and explain each. Justify your response.
20. Give two examples related to measurement and explain each. Include the relevant rule or principle.

Comparison

21. How is data and word problems. related to ■ Multiplication/grouping? Compare the two ideas. Use a simple example.
22. How is ■ Multiplication/grouping related to measurement? Compare the two ideas. Use a school-life example.
23. How is measurement related to data and word problems.? Compare the two ideas. Use a real-world example.
24. How is data and word problems. related to ■ Multiplication/grouping? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Multiplication/grouping related to measurement? Compare the two ideas. Explain in your own words.
26. How is measurement related to data and word problems.? Compare the two ideas. Give a step-by-step response.
27. How is data and word problems. related to ■ Multiplication/grouping? Compare the two ideas. Mention one common misconception.
28. How is ■ Multiplication/grouping related to measurement? Compare the two ideas. State one practical application.
29. How is measurement related to data and word problems.? Compare the two ideas. Justify your response.
30. How is data and word problems. related to ■ Multiplication/grouping? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Multiplication/grouping to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply measurement to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply data and word problems. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Multiplication/grouping to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply measurement to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply data and word problems. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Multiplication/grouping to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply measurement to a realistic situation. What would you do or calculate? State one practical application.
39. Apply data and word problems. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Multiplication/grouping to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of measurement. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of data and word problems.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Multiplication/grouping. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of measurement. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of data and word problems.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Multiplication/grouping. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of measurement. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of data and word problems.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Multiplication/grouping. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of measurement. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show data and word problems.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Multiplication/grouping. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show measurement. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show data and word problems.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Multiplication/grouping. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show measurement. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show data and word problems.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Multiplication/grouping. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show measurement. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show data and word problems.. Include the relevant rule or principle.

MATHEMATICS — 11. Filling and Lifting

Coverage: ■ Capacity and weight; comparison; standard units; practical measurement.

Understanding

1. What is ■ Capacity and weight, and what are its main features? Use a simple example.
2. What is comparison, and what are its main features? Use a school-life example.
3. What is standard units, and what are its main features? Use a real-world example.
4. What is practical measurement., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Capacity and weight, and what are its main features? Explain in your own words.
6. What is comparison, and what are its main features? Give a step-by-step response.
7. What is standard units, and what are its main features? Mention one common misconception.
8. What is practical measurement., and what are its main features? State one practical application.
9. What is ■ Capacity and weight, and what are its main features? Justify your response.
10. What is comparison, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to standard units and explain each. Use a simple example.
12. Give two examples related to practical measurement. and explain each. Use a school-life example.
13. Give two examples related to ■ Capacity and weight and explain each. Use a real-world example.
14. Give two examples related to comparison and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to standard units and explain each. Explain in your own words.
16. Give two examples related to practical measurement. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Capacity and weight and explain each. Mention one common misconception.
18. Give two examples related to comparison and explain each. State one practical application.
19. Give two examples related to standard units and explain each. Justify your response.
20. Give two examples related to practical measurement. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Capacity and weight related to comparison? Compare the two ideas. Use a simple example.
22. How is comparison related to standard units? Compare the two ideas. Use a school-life example.
23. How is standard units related to practical measurement.? Compare the two ideas. Use a real-world example.
24. How is practical measurement. related to ■ Capacity and weight? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Capacity and weight related to comparison? Compare the two ideas. Explain in your own words.
26. How is comparison related to standard units? Compare the two ideas. Give a step-by-step response.
27. How is standard units related to practical measurement.? Compare the two ideas. Mention one common misconception.
28. How is practical measurement. related to ■ Capacity and weight? Compare the two ideas. State one practical application.
29. How is ■ Capacity and weight related to comparison? Compare the two ideas. Justify your response.
30. How is comparison related to standard units? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply standard units to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply practical measurement. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Capacity and weight to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply comparison to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply standard units to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply practical measurement. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Capacity and weight to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply comparison to a realistic situation. What would you do or calculate? State one practical application.
39. Apply standard units to a realistic situation. What would you do or calculate? Justify your response.
40. Apply practical measurement. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Capacity and weight. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of standard units. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of practical measurement.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Capacity and weight. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of standard units. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of practical measurement.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Capacity and weight. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of comparison. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show standard units. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show practical measurement.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Capacity and weight. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show standard units. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show practical measurement.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Capacity and weight. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show comparison. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show standard units. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show practical measurement.. Include the relevant rule or principle.

MATHEMATICS — 12. Give and Take

Coverage: ■ Addition/subtraction strategies; mental maths; word problems.

Understanding

1. What is ■ Addition/subtraction strategies, and what are its main features? Use a simple example.
2. What is mental maths, and what are its main features? Use a school-life example.
3. What is word problems., and what are its main features? Use a real-world example.
4. What is ■ Addition/subtraction strategies, and what are its main features? Show the idea with a diagram where appropriate.
5. What is mental maths, and what are its main features? Explain in your own words.
6. What is word problems., and what are its main features? Give a step-by-step response.
7. What is ■ Addition/subtraction strategies, and what are its main features? Mention one common misconception.
8. What is mental maths, and what are its main features? State one practical application.
9. What is word problems., and what are its main features? Justify your response.
10. What is ■ Addition/subtraction strategies, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to mental maths and explain each. Use a simple example.
12. Give two examples related to word problems. and explain each. Use a school-life example.
13. Give two examples related to ■ Addition/subtraction strategies and explain each. Use a real-world example.
14. Give two examples related to mental maths and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to word problems. and explain each. Explain in your own words.
16. Give two examples related to ■ Addition/subtraction strategies and explain each. Give a step-by-step response.
17. Give two examples related to mental maths and explain each. Mention one common misconception.
18. Give two examples related to word problems. and explain each. State one practical application.
19. Give two examples related to ■ Addition/subtraction strategies and explain each. Justify your response.
20. Give two examples related to mental maths and explain each. Include the relevant rule or principle.

Comparison

21. How is word problems. related to ■ Addition/subtraction strategies? Compare the two ideas. Use a simple example.
22. How is ■ Addition/subtraction strategies related to mental maths? Compare the two ideas. Use a school-life example.
23. How is mental maths related to word problems.? Compare the two ideas. Use a real-world example.
24. How is word problems. related to ■ Addition/subtraction strategies? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Addition/subtraction strategies related to mental maths? Compare the two ideas. Explain in your own words.
26. How is mental maths related to word problems.? Compare the two ideas. Give a step-by-step response.
27. How is word problems. related to ■ Addition/subtraction strategies? Compare the two ideas. Mention one common misconception.
28. How is ■ Addition/subtraction strategies related to mental maths? Compare the two ideas. State one practical application.
29. How is mental maths related to word problems.? Compare the two ideas. Justify your response.
30. How is word problems. related to ■ Addition/subtraction strategies? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Addition/subtraction strategies to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply mental maths to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply word problems. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Addition/subtraction strategies to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply mental maths to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply word problems. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Addition/subtraction strategies to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply mental maths to a realistic situation. What would you do or calculate? State one practical application.
39. Apply word problems. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Addition/subtraction strategies to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of mental maths. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of word problems.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Addition/subtraction strategies. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of mental maths. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of word problems.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Addition/subtraction strategies. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of mental maths. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of word problems.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Addition/subtraction strategies. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of mental maths. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show word problems.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Addition/subtraction strategies. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show mental maths. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show word problems.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Addition/subtraction strategies. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show mental maths. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show word problems.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Addition/subtraction strategies. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show mental maths. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show word problems.. Include the relevant rule or principle.

MATHEMATICS — 13. Time Goes On

Coverage: ■ Clock reading; duration; calendar; sequencing events.

Understanding

1. What is ■ Clock reading, and what are its main features? Use a simple example.
2. What is duration, and what are its main features? Use a school-life example.
3. What is calendar, and what are its main features? Use a real-world example.
4. What is sequencing events., and what are its main features? Show the idea with a diagram where appropriate.
5. What is ■ Clock reading, and what are its main features? Explain in your own words.
6. What is duration, and what are its main features? Give a step-by-step response.
7. What is calendar, and what are its main features? Mention one common misconception.
8. What is sequencing events., and what are its main features? State one practical application.
9. What is ■ Clock reading, and what are its main features? Justify your response.
10. What is duration, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to calendar and explain each. Use a simple example.
12. Give two examples related to sequencing events. and explain each. Use a school-life example.
13. Give two examples related to ■ Clock reading and explain each. Use a real-world example.
14. Give two examples related to duration and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to calendar and explain each. Explain in your own words.
16. Give two examples related to sequencing events. and explain each. Give a step-by-step response.
17. Give two examples related to ■ Clock reading and explain each. Mention one common misconception.
18. Give two examples related to duration and explain each. State one practical application.
19. Give two examples related to calendar and explain each. Justify your response.
20. Give two examples related to sequencing events. and explain each. Include the relevant rule or principle.

Comparison

21. How is ■ Clock reading related to duration? Compare the two ideas. Use a simple example.
22. How is duration related to calendar? Compare the two ideas. Use a school-life example.
23. How is calendar related to sequencing events.? Compare the two ideas. Use a real-world example.
24. How is sequencing events. related to ■ Clock reading? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Clock reading related to duration? Compare the two ideas. Explain in your own words.
26. How is duration related to calendar? Compare the two ideas. Give a step-by-step response.
27. How is calendar related to sequencing events.? Compare the two ideas. Mention one common misconception.
28. How is sequencing events. related to ■ Clock reading? Compare the two ideas. State one practical application.
29. How is ■ Clock reading related to duration? Compare the two ideas. Justify your response.
30. How is duration related to calendar? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply calendar to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply sequencing events. to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply ■ Clock reading to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply duration to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply calendar to a realistic situation. What would you do or calculate? Explain in your own words.
36. Apply sequencing events. to a realistic situation. What would you do or calculate? Give a step-by-step response.

37. Apply ■ Clock reading to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply duration to a realistic situation. What would you do or calculate? State one practical application.
39. Apply calendar to a realistic situation. What would you do or calculate? Justify your response.
40. Apply sequencing events. to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of ■ Clock reading. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of duration. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of calendar. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of sequencing events.. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of ■ Clock reading. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of duration. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of calendar. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of sequencing events.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Clock reading. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of duration. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show calendar. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing events.. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Clock reading. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show duration. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show calendar. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing events.. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Clock reading. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show duration. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show calendar. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show sequencing events.. Include the relevant rule or principle.

MATHEMATICS — 14. The Surajkund Fair

Coverage: ■ Money, patterns, measurement and data in a fair/market context.

Understanding

1. What is ■ Money, and what are its main features? Use a simple example.
2. What is patterns, and what are its main features? Use a school-life example.
3. What is measurement and data in a fair/market context., and what are its main features? Use a real-world example.
4. What is ■ Money, and what are its main features? Show the idea with a diagram where appropriate.
5. What is patterns, and what are its main features? Explain in your own words.
6. What is measurement and data in a fair/market context., and what are its main features? Give a step-by-step response.
7. What is ■ Money, and what are its main features? Mention one common misconception.
8. What is patterns, and what are its main features? State one practical application.
9. What is measurement and data in a fair/market context., and what are its main features? Justify your response.
10. What is ■ Money, and what are its main features? Include the relevant rule or principle.

Examples & Classification

11. Give two examples related to patterns and explain each. Use a simple example.
12. Give two examples related to measurement and data in a fair/market context. and explain each. Use a school-life example.
13. Give two examples related to ■ Money and explain each. Use a real-world example.
14. Give two examples related to patterns and explain each. Show the idea with a diagram where appropriate.
15. Give two examples related to measurement and data in a fair/market context. and explain each. Explain in your own words.
16. Give two examples related to ■ Money and explain each. Give a step-by-step response.
17. Give two examples related to patterns and explain each. Mention one common misconception.
18. Give two examples related to measurement and data in a fair/market context. and explain each. State one practical application.
19. Give two examples related to ■ Money and explain each. Justify your response.
20. Give two examples related to patterns and explain each. Include the relevant rule or principle.

Comparison

21. How is measurement and data in a fair/market context. related to ■ Money? Compare the two ideas. Use a simple example.
22. How is ■ Money related to patterns? Compare the two ideas. Use a school-life example.
23. How is patterns related to measurement and data in a fair/market context.? Compare the two ideas. Use a real-world example.
24. How is measurement and data in a fair/market context. related to ■ Money? Compare the two ideas. Show the idea with a diagram where appropriate.
25. How is ■ Money related to patterns? Compare the two ideas. Explain in your own words.
26. How is patterns related to measurement and data in a fair/market context.? Compare the two ideas. Give a step-by-step response.
27. How is measurement and data in a fair/market context. related to ■ Money? Compare the two ideas. Mention one common misconception.
28. How is ■ Money related to patterns? Compare the two ideas. State one practical application.
29. How is patterns related to measurement and data in a fair/market context.? Compare the two ideas. Justify your response.
30. How is measurement and data in a fair/market context. related to ■ Money? Compare the two ideas. Include the relevant rule or principle.

Application

31. Apply ■ Money to a realistic situation. What would you do or calculate? Use a simple example.
32. Apply patterns to a realistic situation. What would you do or calculate? Use a school-life example.
33. Apply measurement and data in a fair/market context. to a realistic situation. What would you do or calculate? Use a real-world example.
34. Apply ■ Money to a realistic situation. What would you do or calculate? Show the idea with a diagram where appropriate.
35. Apply patterns to a realistic situation. What would you do or calculate? Explain in your own words.

36. Apply measurement and data in a fair/market context. to a realistic situation. What would you do or calculate? Give a step-by-step response.
37. Apply ■ Money to a realistic situation. What would you do or calculate? Mention one common misconception.
38. Apply patterns to a realistic situation. What would you do or calculate? State one practical application.
39. Apply measurement and data in a fair/market context. to a realistic situation. What would you do or calculate? Justify your response.
40. Apply ■ Money to a realistic situation. What would you do or calculate? Include the relevant rule or principle.

Reasoning & Error Analysis

41. A student gives an incorrect explanation of patterns. Identify a likely error and explain the correction. Use a simple example.
42. A student gives an incorrect explanation of measurement and data in a fair/market context.. Identify a likely error and explain the correction. Use a school-life example.
43. A student gives an incorrect explanation of ■ Money. Identify a likely error and explain the correction. Use a real-world example.
44. A student gives an incorrect explanation of patterns. Identify a likely error and explain the correction. Show the idea with a diagram where appropriate.
45. A student gives an incorrect explanation of measurement and data in a fair/market context.. Identify a likely error and explain the correction. Explain in your own words.
46. A student gives an incorrect explanation of ■ Money. Identify a likely error and explain the correction. Give a step-by-step response.
47. A student gives an incorrect explanation of patterns. Identify a likely error and explain the correction. Mention one common misconception.
48. A student gives an incorrect explanation of measurement and data in a fair/market context.. Identify a likely error and explain the correction. State one practical application.
49. A student gives an incorrect explanation of ■ Money. Identify a likely error and explain the correction. Justify your response.
50. A student gives an incorrect explanation of patterns. Identify a likely error and explain the correction. Include the relevant rule or principle.

Higher-Order / Activity

51. Design a short activity, investigation, problem, model, or demonstration to test or show measurement and data in a fair/market context.. Use a simple example.
52. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Money. Use a school-life example.
53. Design a short activity, investigation, problem, model, or demonstration to test or show patterns. Use a real-world example.
54. Design a short activity, investigation, problem, model, or demonstration to test or show measurement and data in a fair/market context.. Show the idea with a diagram where appropriate.
55. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Money. Explain in your own words.
56. Design a short activity, investigation, problem, model, or demonstration to test or show patterns. Give a step-by-step response.
57. Design a short activity, investigation, problem, model, or demonstration to test or show measurement and data in a fair/market context.. Mention one common misconception.
58. Design a short activity, investigation, problem, model, or demonstration to test or show ■ Money. State one practical application.
59. Design a short activity, investigation, problem, model, or demonstration to test or show patterns. Justify your response.
60. Design a short activity, investigation, problem, model, or demonstration to test or show measurement and data in a fair/market context.. Include the relevant rule or principle.
